

Summary of Advantages of—

Chris. B. Christians' Better Construction for Homes

REMEMBER that plaster and stucco is safe and successful—It depends in a large measure upon the construction to which it is applied.

Its reasonableness in cost renders splendid protection against fire and weather and in building a home it is not the original cost, but the up-keep that costs so much.

Metallic and stucco construction for the better home is without equal, the uniform thickness of plaster keeps cracks away.

Furred with channel iron gives greater rigidity which checks vibrations.

A construction that offers resistance to fire and a saving of insurance.

A home cooler in summer and warmer in winter and a saving of fuel.

Periodical painting is not required for the stucco covered home.

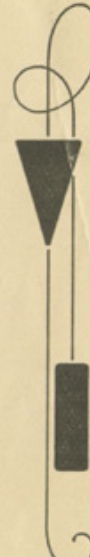

If building is properly constructed, rapid changes in temperature, arid heat, rains, moisture, sunshine and frost have no effect on properly applied stucco.

When some one says "Plaster always cracks" those who understand the CHRISTIAN'S BETTER HOME CONSTRUCTION will answer, "I don't see how it can when the plaster is free from all wood framing."

The older the stucco gets the better home you'll have.

Comforts are certain to be increased in a stucco home.

Before you build, have your architect to inspect the Christians Better Home Construction.
